

13 February 2013

To Whom it may concern:

The Embassy of the United States of America has just recently completed a new office space renovation project for the General Services Office personnel. All electrical, lighting, fire alarm, telecom, and communication systems for this fifty-one person office were designed and installed to meet the strictest US building and electrical system standards by Electrical Contractor OOO ABEM under the direction of General Director Mr. Abbas Cekim and Senior Electrical Engineer Mr. Baris Gok. In several instances, Mr. Gok made recommendations to improve performance of certain systems. The installation work was executed using the highest professional methods and the results easily meet and, in some cases exceed, the requirements of the U.S. Embassy.

In addition to installing, testing, and commissioning the systems, Mr. Gok conducted several system training sessions that were well delivered and extremely well received by the technical personnel at the Embassy.

OOO ABEM's project closeout documentation was accurate, complete, and very well done.

I want to take this opportunity to thank OOO ABEM, and in particular Mr. Cekim, Mr. Baris Gok and site superintendant Mr. Muslim Fayzmamedov for a superlative performance designing, installing, and commissioning these electrical systems. It was a great pleasure to have worked with Baris and his team. I highly recommend him and OOO ABEM for any building electrical design and installation works.

Sincerely,

A handwritten signature in black ink, appearing to read "John D. Sligh".

John D. Sligh

OBO Project Director
